Project Design Phase-II Solution Requirements (Functional & Non-functional)

Date	
Team ID	PNT2022TMID22142
Project Name	Smart farming -IOT Enabled
	Smart farming Application
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Form
		Registration through Gmail
		Registration through LinkedIn
FR-2	User Confirmation	Confirmation via Email
		Confirmation via OTP
FR-3	System login	Check authorization
		Check access
FR-4	Manage schedule	Manage system admins
		Manage user consent
		Manage user
FR-5	Check details	Moist details
		Temperature details
FR-6	Log out	Exit

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The quality attributes of a system are specified by its usability. This requirement can be the rate at which a system must perform in order to meet user expectations.
NFR-2	Security	Individual and sensitive data must be safeguarded by their provision until the decision-making storing stages.
NFR-3	Reliability	The promise dataset is used in this case. To avoid farm neglect, the model employs diligence and shared protection. service
NFR-4	Performance	Low power consumption and data transmission rates are required. This implementation concept integrated sensors with soil and environmental parameters.
NFR-5	Availability	Cost, sensitivity, design complexity, storage capacity, development process, response criteria, and environmental impact and farming equipment made possible by crops, weather, humidity, and so on are among the quality characteristics taken into account.

NFR-6	Scalability	It is the primary concern for the IoT platform. It has various IOT platform options that affect the system and in real time.
		Accountability in the workplace
